The polypeptides are useful in diagnosing disease associated with mast cells and controlling MITF (microphitalmia-associated transcription factor) and the MITF gene, especially in mast cells. The present sequence is that of a MITF protein isoform encoding cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Polypeptides that control MITF and MITF gene in mast cells for use in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   87 ITCCTCATGACTCTTTTCTGCTCTTAAGATCAGAATAATCCAGTTCATCCTAAAATGCTT

The invention relates to a novel method for detecting soft tissue sarcome which comprises obtaining a first soft tissue sample from an individual data and a normal soft tissue sample from the same or different individual, determining the expression of some in both soft tissue samples and comparing the expression of the gene in both soft tissue samples and comparing the expression in the first soft tissue sample indicates the presence of soft tissue samples. The indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                              146
                                                                                                                                                                                                                                     The invention relates to polypeptides, comprising at least an optionally mutated amino acid sequence AAG78184-AAG78187 and having c-kit gene promoter controlling activity, especially in mast cells. The polypeptides are useful in diagnosing disease associated with mast cells and controlling MITF (microphtalmia-associated transcription factor) and the MITF gene, especially in mast cells. The present sequence is that of a MITF protein isoform related DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                               98

                                                                                                                                                             The invention relates to polypeptides, comprising at least an optionally mutated amino acid sequence AAG78184-AAG78187 and having c-kit gene promoter controlling activity, especially in mast cells. The polypeptides are useful in diagnosing disease associated with mast cells and controlling MITF (microphtalmia-associated vith mast cells and the MITF gene, especially in mast cells. The present sequence is that of a MITF protein isoform encoding cDNA
                                                                                                                                                                                                                                                                                                                                          98

/note="Vector: pBluescript II SK (+) XR; Site 1: EccRI (5'
end of cDNA); Site 2: XhoI (3' end of cDNA); Sapling trees
two metres in height and grown under greenhouse conditions
were exposed to continuous feeding by Cryptorhynchus
lapathi (poplar and willow borer) adults caged on the
sapling using mesh bags. Bark (with phloem and cambium
attached) from within the caged region was harvested 2
hours, 6 hours and 48 hours after the onset of treatment.
mRNA was isolated from each tissue source independently
and equal quantities of mRNA from each tissue were then
pooled. cDNA was prepared from 5 micrograms of mRNA and
directionally ligated into the pBluescript II SK (+) XR
vector using the pBluescript II XR cDNA Library
Construction Kit according to manufacturer's instructions
with modifications (Stratagene). Plasmid DNA was then
transformed by electroporation into DH10B cells
(Invitrogen) for propagation. Normalization was applied
according to published methods [Bonaldo M.F. et al. (1996)
Genome Research 6(9):791] in order to reduce the abundance
of highly expressed transcripts."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC927097 740 bp DNA linear GSS 08-AUG-2003 t093j2lba.fl TAMBT Bos taurus genomic clone t093j2lba, genomic

/ note="Organ: pancreas; Vector: pBluescript II KS(+);
Site=1: BcoRi; Site=2: Not!; This normalized library was
constructed from | million independent clones. cDNA
synthesis was initiated using an oligo(dT) primer, using
methylated C in the first strand synthesis reaction.
Following this first strand reaction, double-stranded
was blunted, ligated to NotI adapters, digested with
ECOMI, size-selected, and cloned into the NotI and ECORI
compatible sites of a custom modified MCS of the
pBluescript (KS+) vector. The library was normalized in 2
rounds using conditions adapted from Soares et al., PNAS
(1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6
(1996): 791, except that a significantly longer
reannealing hybridization was used."

Publication No. US20020198371A1

GENERAL INFORMATION:

APPLICANT: Wang, David G.

TITLE OF INVENTION: Identification and Mapping of Single Nucleotide

TITLE OF INVENTION: David G.

TITLE OF INVENTION: David G.

TITLE OF INVENTION: DAVE: 2002-04-30

CURRENT APPLICATION NUMBER: US 60/128,006

PRIOR PAPLICATION NUMBER: US 60/198,676

PRIOR FILING DATE: 2000-07-12

PRIOR PALING DATE: 2000-03-29

PRIOR PLIING DATE: 2000-03-29

PRIOR PLIING DATE: 2000-03-29

PRIOR PLIING DATE: 1999-11-23

PRIOR FILING DATE: 1999-11-23

On Sep 19, 2002 this sequence version replaced gi:21953804.
On Sep 19, 2002 this sequence expension of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas and whole genome shotgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contigs accontigs are ordered and oriented, and separated individual sequence contigs are ordered and there may be sequence by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contigs will be indicated in the feature shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NOTE: Estimated insert size may differ from sequence length (see http://www.ngsc.bcm.tmc.edu/docs/Genbank draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 2 contigs. The true order of the places is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120 TGAAGGTAAGCTGGCAGCGAGCCTGACTTTCATCTAGTTTCCTCGCTTCCTT 179
